Aumentum Valuation Highlights

Our web-based CAMA system is designed to support the unique demands of any jurisdiction and has the ability to grow and evolve with you over time. Whether it's handling jurisdiction-specific property characteristics through user controlled configuration or the need for flexible valuation engines, Aumentum's Real Property Valuation system will provide you with a solid foundation and toolset for your next reassessment. Through its use of effective versioned data, you will have crucial point in time appraisal capabilities and sales tracking.

Data Management
Valuation achieves customization through the configuration of property data, giving users control over both their characteristic data as well as how it's viewed.

Mobile Data Collection
Through integration with your favorite 3rd party field data collection provider, you'll have the ability to log in and update property characteristics from the field, while enforcing the same configured business rules you use at the office.

Modular Valuation Engines
All of our valuation engines are self contained in order to support inclusion of jurisdiction specific configuration, while at the same time insulating you from outside jurisdiction configuration and eliminating unintended breakages over time.

Eagleview (Pictometry) Integration
Using Eagleview's oblique imagery and 360-degree aerial viewpoints, jurisdictions can reduce time and money spent on field inspections.

Custom Forms & Correspondence
In a user-friendly Microsoft application environment, users create letters and forms using Aumentum correspondence tools.

Case Management
An optional Aumentum module, Case Management provides jurisdictions or their jurisdictional value review boards, the ability to customize and manage their Appeals process from start to finish.
